

Overall Technical Workflow

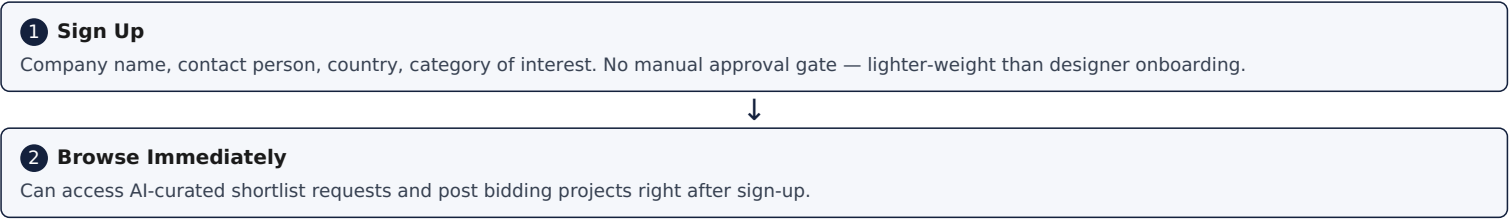

Designer-Manufacturer Marketplace Platform — End-to-End System Flow

1. Onboarding Workflow

Designer Onboarding Designer

Manufacturer Onboarding Manufacturer

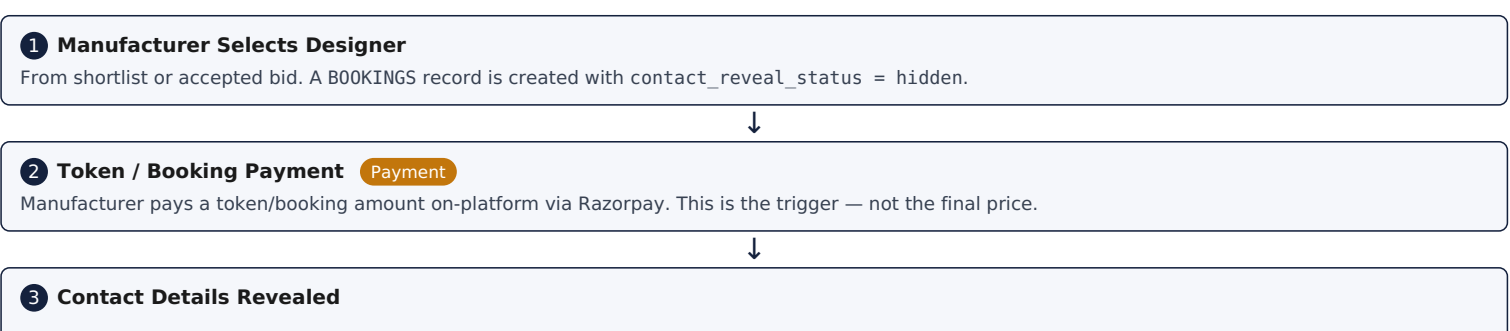

2. Discovery Workflow — Two Parallel Paths

Path	How it Works	System Behavior
A. AI-Curated Shortlist	Manufacturer submits a project brief. System generates a shortlist of 3 designers matched on category, tier, availability, and price fit.	Creates AI_SHORTLISTS + 3 SHORTLIST_DESIGNERS records. Manufacturer selects one to proceed to booking.
B. Bidding	Manufacturer pays a listing fee to post an open project. Designers within the matching price range submit bids (price, timeline, pitch).	Creates PROJECT_LISTINGS (fee gated via LISTING_FEE_TRANSACTIONS) + BIDS. Bidding window auto-closes; manufacturer accepts one bid.

GATE — Monthly Caps: Both designer bid submissions and manufacturer listing posts are capped per month (tracked in MONTHLY_CAPS) to prevent spam and preserve curation quality.

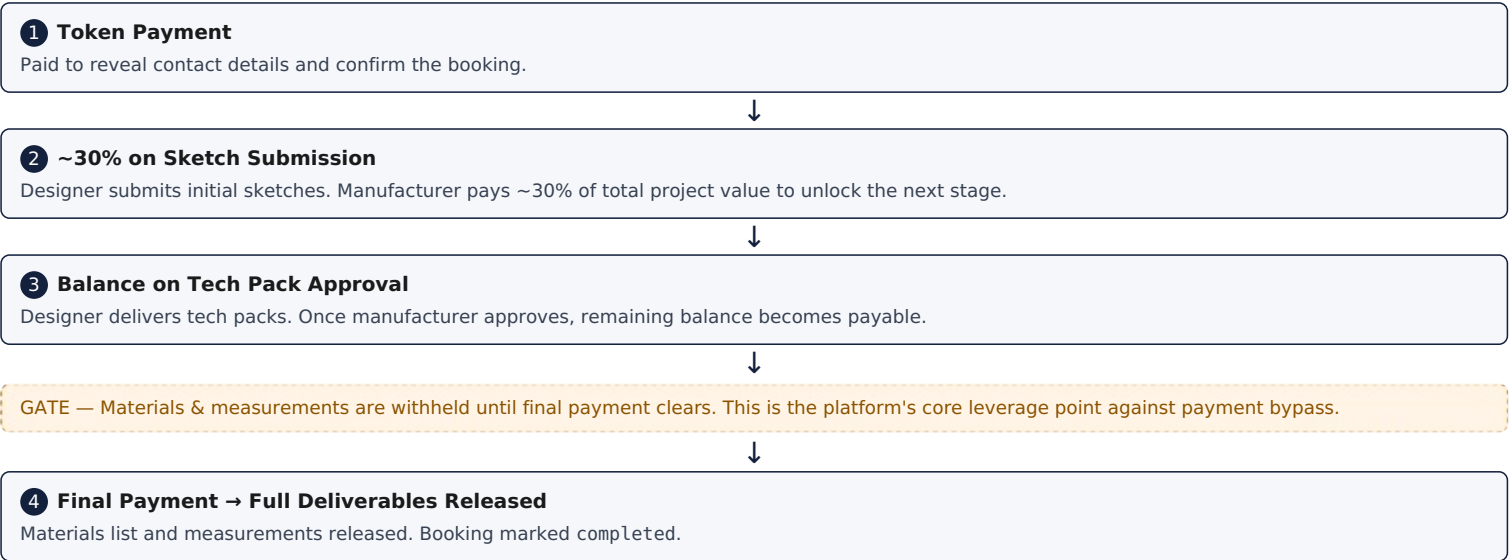

3. Booking & Contact-Reveal Workflow

contact_reveal_status flips to revealed only after token payment clears. This is the core anti-leakage mechanism — no direct contact is possible before payment.

4. Staged Payment Workflow

Unlike a single lump-sum payment, the total project value is broken into gated stages. Each stage must clear before the next deliverable is unlocked.

Split Logic (applies at every stage)

Component	Share	Mechanism
Platform Commission	40%	Auto-deducted via Razorpay Route split at each stage settlement
Designer Payout	60%	Released to designer's linked Razorpay Route sub-account once stage is marked paid

Confirm with Faraz/legal whether 40% applies per-stage or only on total project value — affects the TRANSACTIONS calculation logic.

5. Trust, Safety & Curation Workflow

- Payment bypass detection:** not automatable — relies on a "Report User" flow reviewed by admin, not system-triggered detection.
- Flag → Debar → Ban:** Admin action recorded in FLAGS_BANS; banned users lose platform access immediately, existing in-progress bookings frozen pending manual review.
- NDA enforcement:** Platform NDA is systemic (signed at onboarding); exporter-specific NDAs are encouraged but tracked as separate optional documents per booking.
- Curation:** No designer becomes visible/bookable without curator sign-off — this is a permanent gate, not a one-time launch step.

6. System Architecture Overview

Frontend / Backend Next.js — handles manufacturer & designer dashboards, booking flows, admin panel	Database / Auth / Storage Supabase (PostgreSQL) — stores all entities per the ER model, handles auth and portfolio file storage	Hosting Vercel — frontend + serverless functions	Payments Razorpay Route — staged split payments, sub-accounts per designer for automated payout
---	---	--	---

Key Automated Triggers

Trigger Event	System Action
Curator approves designer	Designer profile becomes searchable; notification sent to designer
Token payment confirmed	Contact details unlocked on both dashboards; notification sent to both parties
Sketch stage payment confirmed	Next deliverable stage unlocked for designer to begin tech pack
Final payment confirmed	Materials/measurements released; booking marked complete; review prompt triggered
Bidding window expires	Listing auto-closes; manufacturer notified to select a bid or listing marked expired
Monthly cap reached	Further bid/listing submissions blocked until next cycle

7. Sign-Up & Approval Forms

Field-level structure for the three key forms in the onboarding workflow. These map directly to the DESIGNERS, MANUFACTURERS, and curator-review fields in the ER model — hand these to your UI/UX designer as-is or adapt.

Designer Sign-Up Form Designer

Step 1 of 2 — Basic Details

Full Name *

Email *

Phone Number *

Location / City *

Design Category *

Accessories / Footwear / Both

Years of Experience *

Fresher / 2+ yrs / 5+ yrs

Step 2 of 2 — Portfolio & Agreement

Portfolio Upload (min. 3 items) *

Drag & drop files, or paste Behance / Instagram link

Short Bio *

Seasonal Availability

Select active seasons (S1-S4)

☐ I agree to the Platform NDA *

Submit for Review →

On submit: status set to "Pending Review" — profile is not visible to manufacturers until curator approval.

Manufacturer Sign-Up Form Manufacturer

Company Details

Company Name *

Contact Person *

Business Email *

Phone Number *

Country *

Business Type

Exporter / Domestic Manufacturer

Category of Interest *

Accessories / Footwear / Both

Create Account →

No manual approval gate — account is active immediately and can browse shortlists / post listings right away.

Curator / Admin Approval Panel Admin / Curator

Designer Review Queue — Single Record View

Applicant Summary

Name, category, tier, submission date (read-only, pulled from profile)

Portfolio Preview

Inline viewer for uploaded files / linked portfolio

Curator Notes

Internal comment, not shown to designer

Decision *

Approve / Reject / Request Changes

Rejection Reason (if applicable)

Sent to designer as feedback

Confirm Decision →

On "Approve": designer flips to searchable/bookable and receives a notification. On "Reject": designer notified, may resubmit once.

8. AI Automation Opportunities

Where AI can realistically reduce manual work across each role. Grouped by who benefits, with a rough build-priority note — treat the "Now" column as safe for MVP/prototype, "Later" as v2 once volume justifies the investment.

For Designers Designer

Automation	What It Does	Priority
AI Portfolio Pre-Screen	Scores incoming portfolios against curation criteria (category fit, quality signals, completeness) before it reaches a human curator — speeds up review, doesn't replace it.	Now
AI Bid Pricing Assistant	Suggests a competitive bid range to a designer based on similar past listings, their tier, and category — helps freshers avoid underpricing.	Later
Auto-Draft Tech Pack Notes	Converts a designer's sketch + rough notes into a structured tech-pack-ready summary/template, saving manual write-up time.	Later

For Manufacturers Manufacturer

Automation	What It Does	Priority
AI-Curated Shortlist Matching	Already part of the core flow — matches project brief to 3 designers using category, tier, price range, and availability signals.	Now
Brief-to-Structured-Spec Converter	Manufacturer describes a project in plain language; AI converts it into a structured listing (category, budget band, deadline, key requirements) to reduce drop-off from a blank form.	Now
Bid Comparison Summary	When multiple bids come in, AI generates a short plain-language comparison (price vs. timeline vs. relevant past work) so manufacturers decide faster.	Later

For Admins / Curators Admin

Automation	What It Does	Priority
Fraud/Bypass Signal Flagging	Flags suspicious patterns for human review only — e.g. repeated off-platform contact-info sharing attempts in messages, or manufacturers/designers exchanging bookings unusually fast. Never auto-bans; always routes to a human decision.	Later
Curation Assist Score	Pre-ranks the designer review queue by estimated fit/quality, so curators like Ananya review the most promising or most uncertain profiles first instead of a random queue order.	Now
Support Ticket Auto-Triage	Classifies incoming Contact Us / support messages (payment issue, dispute, technical bug, general query) and routes to the right handling flow automatically.	Now
Dispute Summary Generator	When a booking is disputed, AI summarizes the chat/booking history into a short brief for the admin, instead of them reading the full thread.	Later

Important: none of these AI steps should make final approve/reject, ban, or payment-release decisions on their own — every automation above is designed to assist a human decision-maker (curator, admin, or the manufacturer/designer themselves), not replace their judgment. This matters both for trust ("curated, not machli bazaar") and for reducing legal exposure on account bans and disputes.

9. Notes for Legal / Marketing Alignment

- Avoid encoding a specific public delivery commitment (e.g. "21 days") into system-generated communications, invoices, or contracts — use approximate framing only, pending lawyer review.
- Platform should be architecturally country-agnostic from the start (currency, language-ready fields) to support later UK/Italy/Spain designer onboarding without schema changes.
